

PALM

| For home care agencies

A 7-SLIDE BREAKDOWN

**Your best nurse
does 2 hours of
typing after every
assessment.**

Here's how agencies are deleting that, and signing families faster because of it.

THE PROBLEM

One conversation becomes four documents. All typed by hand.

Visit notes

~45 min

Care plan

~40 min

Billable services

~25 min

Service agreement

~55 min

And every hour it takes, the family gets one hour closer to calling another agency.

Every one of those documents was already spoken out loud, *during the visit.*

The client said what they need. You said what you'd provide. The information exists. Someone just has to write it down.

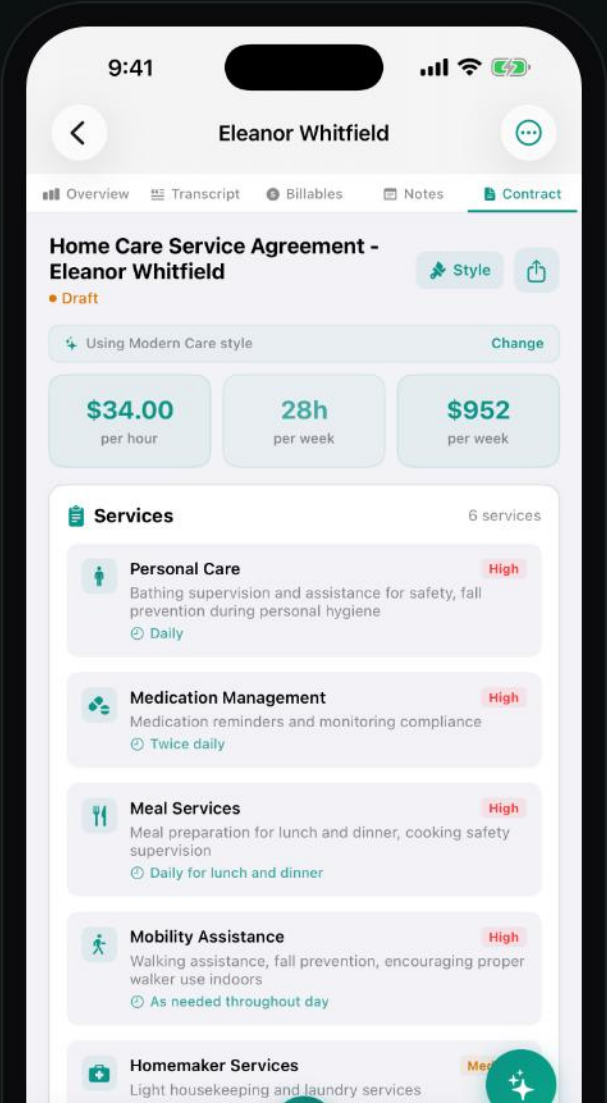

HOW PALM WORKS

Press record. That's the workflow.

-  **1 Record the assessment**
PALM captures the visit and separates every speaker.
-  **2 It writes everything**
Transcript, clinical notes, care plan, and priced billables, all from what was actually said.
-  **3 Contract, drafted**
A service agreement that follows your state's rules. You review and send.

NOT A MOCKUP

This is the actual contract screen.

WHY IT MATTERS

Speed closes contracts.

Same-day agreements

The family signs while they're still sure, not after three other agencies call back.

No lost billables

Services mentioned in passing get captured, priced, and into the agreement.

Evenings, returned

Your team documents visits by doing the visit. Nothing after.

Record. Transcribe. Contract.

Try it on your next assessment. Free to start, no card, works in all 50 states.
