PalmCare AI
Record. Transcribe. Contract. · Palm It.
Version 1 · August 14, 2026
Owner: Muse Ibrahim

1. North star

Product: PalmCare AI turns a recorded home care assessment into a care plan, visit notes, billables, and a state-specific service contract. Built for non-medical home care agencies.

One-line promise: Record the visit. Palm writes the paperwork. You review and send.

Primary goals (next 90 days)

- Grow organic search from ~36 clicks / 3 months toward consistent weekly organic sessions.
- Drive website traffic, demo bookings (demo@palmtai.com), and App Store downloads.
- Keep Trust and Safety visible: human review, drafts from what was said, agency stays in control.
- Ship product reliably (iOS + API) while marketing runs on cloud schedules.

Scoreboard to watch weekly

Channel	Metric	Current (Aug 2026)	Near-term target
Google Search	Clicks / impressions / indexed	36 / 1.25K / 15 indexed	Indexed >20; CTR up on paperless queries
Instagram	Reel views / reach	Reels ~3x static; top Reel ~366 views	Daily Reels; hook in 3s
Facebook organic	Reach	Near dead without boost	Reel cross-post + ads only
LinkedIn	Depth / comments	Company Page + engagement bank	2-4 insight posts/week + golden hour
App Store	Trials / subs	App live; IAP submitted	Trial to paid conversion
Site	Register / book-demo	Shortlinks /a /d /w /b live	Track UTMs in PostHog + GA4

2. Brand system (non-negotiables)

Voice: Calm authority. Caregiver-first warmth. Plainspoken and concrete. Quietly credible.

CTA: Palm It. Organic to palmcareai.com. Ads to demo@palmtai.com.

Color: Teal #0d9488. Brand mark: PALM / Palm.

Pillars (every post = exactly one)

Pillar	Core argument
How it works	One recording to transcript, care plan, billables, contract
Time and relief	Evenings back. Stop the second job of paperwork.
Trust and accuracy	State-specific contracts. Built from what was said. Human review.
Proof	Real product facts only. No fake testimonials.

Banned in customer copy

- Em dashes and en dashes; slash-joined alternatives.
- Buzzwords: revolutionize, seamless, leverage, game-changing, unlock, empower.
- Fake stats, fake testimonials, AI actors claiming to be customers.
- Unverifiable claims (number one tool, 100% guaranteed).

Allowed product facts: four documents from one recording; 50-state contract rules; minutes not hours; human review before send.

3. SEO and AEO strategy

Technical foundation is solid (speed, HTTPS, sitemap, schema). Growth bottleneck is indexation, high-intent pages, freshness, and converting impressions into clicks.

What already shipped (Aug 2026)

- Commercial pages: /home-care-documentation-software, /compare, /alternatives
- Sitemap hygiene (login removed); PostHog CSP unblocked
- Blog E-E-A-T (Muse as author), related posts, footer internal links
- Posts for GSC gaps (paperless contracts, state agreements, category compare)
- Indexing requested in Search Console for money URLs

GSC snapshot to beat

Metric	Value
Clicks (3 mo)	36
Impressions	1.25K
CTR	2.9%
Avg position	13.8
Indexed / not indexed	15 / 19
Top zero-click opportunity	paperless contracts home care (88 impr)

SEO operating cadence

When	Task
Mon	GSC Performance: queries with impressions + low CTR
Wed	One helpful blog draft or refresh (answer-first lead)
Fri	Indexation check; request indexing only for money URLs
Monthly	Refresh 1-2 older posts with real new material; update llms.txt
Later	State pages only with real state_rules data (no thin pSEO)

Next content cluster (ship weekly)

Status	Topic
Done	Service agreement by state; AxisCare/WellSky/CareTime vs AI docs
Done	Intake timing; private duty checklist; paperless contracts
Next	Billables checklist after intake
Next	Florida vs Texas contract differences (honest, not legal advice)

Status	Topic
Next	Train caregivers on voice assessments; HIPAA checklist for AI tools

4. Marketing and social distribution

Data lessons (Jun-Aug 2026 Meta)

- Instagram carries discovery. Facebook organic is near dead without boost.
- Reels beat static ~3x. Lead with 7-15s video. Hook in first 3 seconds.
- Winners: evenings paperwork relief, drive-back story, App Store live, myth-bust, Friday leave-on-time.
- Losers: QR-only download cards, vague abstracts alone, long ~66s how-tos.

Active campaign: Sep traffic month (Aug 14 - Sep 13)

Old Jul-Aug calendar stopped Aug 14. Runner: scripts/social/sep2026_calendar.py via GitHub Actions (11:30 AM and 6:30 PM ET).

Slot	Channels	Focus
AM 11:30 ET	IG + Threads daily; FB on Reel days; LinkedIn scheduled	Reach + product story
PM 18:30 ET	Second daily push	QR, Trust/Safety, real app screens
CTA rotation	Shortlinks	/a app · /s signup · /d demo · /w features · /b blog

2026 algorithm rules

- Saves and DM sends beat likes. Design for bookmark / send to a coworker.
- End with one specific answerable question. Reply in the first 30-60 minutes.
- LinkedIn: full value in the post. Link-in-first-comment is penalized. Prefer URL on image or bio.
- Threads: keep links out of body (first reply). Replies beat likes.
- Reddit: 9:1 non-promo; answer first; disclose you built it.

Creative pipeline

- Stills: Nano Banana 2 / WaveSpeed (product-accurate). Brand teal.
- Motion: Kling / Higgsfield Seedance; Remotion for captions + CTA end card.
- Burned-in captions always. CTA end card at least 1.2s: Palm It. palmcareai.com

5. Founder engagement workflow (approval only)

Separate from product auto-posts. LinkedIn + Threads engagement pieces are written in Muse's voice and **never auto-posted** without email approval.

Daily Mon-Fri

- 08:00 ET: engagement-preview.yml emails 3 LinkedIn + 3 Threads options.
- Reply LI: A / TH: B (or paste rewrite).
- Only after approval does an agent post.
- Stay present in the golden hour and reply with substance.

Files: scripts/social/engagement_bank.py · send_engagement_preview.py · ENGAGEMENT_README.md

Product marketing auto-post workflow

- GitHub Actions social-posts.yml runs against sep2026_calendar.py.
- Dedupe via scripts/social/.posted_log.json committed back to main.
- Manual dry run: gh workflow run social-posts.yml -f date=YYYY-MM-DD -f dry_run=true
- Tokens expire ~Sep 8, 2026 (LinkedIn + Threads). Refresh .env and GitHub secrets.

6. Product, App Store, and revenue ops

Area	Status / action
App Store	App live (v1.0). ASO metadata staged on v1.1.
Subscriptions	Monthly tiers submitted; annuals may need ASC UI.
Pricing page	Website \$199/mo narrative; IAP in iOS. Keep pricing.md accurate.
Onboarding	Deliver wow (record to docs) before hard paywall pressure.
Cancel save	Plan one offer screen when cancel intent fires.
Day-3 push	Configure lifecycle discount for fence-sitters.

TestFlight release checklist (every build)

- Bump CURRENT_PROJECT_VERSION in ios-app/project.yml; archive; upload.
- Wait for VALID processing; set whatsNew on betaBuildLocalizations.
- Attach to Agencies external group; invite testers (invite is not the same as add to group).
- Review notes use working demo-screenshots@palmtai.com (password only in .env).

7. Daily / weekly / monthly task boards

Every weekday (founder)

- Approve or rewrite engagement email picks (LI / TH).
- Golden hour: reply to comments on recent posts.
- Scan demo@palmtai.com / sales inbox for demo requests.
- Quick glance: Railway API health + support fires.

Every weekday (marketing automation)

- Confirm social-posts AM/PM Actions succeeded.
- If a post failed, fix token/asset and re-run for that date only.

Weekly (pick a fixed day)

- Search Console: Performance + Pages; note 3 query opportunities.
- PostHog / GA4: top landings, register, book-demo, /a app clicks.
- Ship or schedule 1 SEO article / refresh.
- Review Meta winners. Kill losers; double down on hooks that worked.
- Update content calendar notes for next week.

Monthly

- Refresh LinkedIn + Threads tokens if near expiry; sync GitHub secrets.
- ASO: screenshot / subtitle check vs live app.
- Security ship-gate skim: RLS, rate limits, no secrets in public repo.
- Cost skim: Supabase advisors, storage orphans, runaway job logs.
- Update this strategy PDF with new metrics.

8. Core workflows (how work moves)

A. Social product post (cloud)

Calendar in sep2026_calendar.py → assets in public/marketing/social → GitHub Action posts → .posted_log.json prevents doubles.

B. Founder engagement post

Bank generates options → email preview Mon-Fri → Muse replies with letter → agent posts only then → golden hour replies.

C. SEO content

Pick GSC query → write answer-first post in blog/data.ts → deploy → sitemap → URL Inspection → Request indexing → internal links.

D. Creative production

Brief from performance data → stills → motion → captions/CTA → export to campaign folder + Desktop → calendar entry.

E. Demo / sales follow-up

Inbound demo@palmtai.com → book demo → send App Store + brochure → trial guidance → follow up day 3 if silent.

F. iOS release

Code → bump build → archive/upload → What to Test → external group + invites → monitor review.

9. Systems map and 90-day focus

System	Where	Owner action
Website	palmcareai.com	SEO pages, blog, shortlinks
API	Railway FastAPI	Pipeline health, billing verify
iOS	App Store + TestFlight	Builds, IAP, review notes
Analytics	PostHog + GA4 + GSC	Weekly scoreboard
Social posting	GitHub Actions + Meta + LinkedIn	Keep tokens fresh
Engagement	Resend email previews	Approve LI/TH daily
Creatives	marketing/ + Desktop folders	Versioned exports
Docs deliverables	Desktop/PalmCare Documents	Decks, PDFs, plans

Key URLs

- Site: <https://palmcareai.com>
- Sitemap: <https://palmcareai.com/sitemap.xml>
- App Store: <https://apps.apple.com/us/app/palm-home-care-contracts/id6766371988>
- Search Console: sc-domain:palmcareai.com
- Demo: demo@palmtai.com

90-day focus

1) Get money pages indexed and ranking for paperless / documentation queries. 2) Run Sep traffic month with Reels-first creative and Trust/Safety. 3) Keep founder LinkedIn depth posts approval-only and reply fast. 4) Convert demos and trials without fake claims. 5) Protect the product: secure, measured, and shipping.

Consolidates SEO recovery (Aug 2026), Meta performance briefs, Sep traffic campaign, brand voice, engagement approval flow, App Store ops, and build-playbook growth rules. Update monthly with live metrics.
